#### The NASA STI Program Office ... in Profile

Since its founding, NASA has been dedicated to the advancement of aeronautics and space science. The NASA Scientific and Technical Information (STI) Program Office plays a key part in helping NASA maintain this important role.

The NASA STI Program Office is operated by Langley Research Center, the lead center for NASA's scientific and technical information. The NASA STI Program Office provides access to the NASA STI Database, the largest collection of aeronautical and space science STI in the world. The Program Office is also NASA's institutional mechanism for disseminating the results of its research and development activities. These results are published by NASA in the NASA STI Report Series, which includes the following report types:

- TECHNICAL PUBLICATION. Reports of completed research or a major significant phase of research that present the results of NASA programs and include extensive data or theoretical analysis. Includes compilations of significant scientific and technical data and information deemed to be of continuing reference value. NASA's counterpart of peer-reviewed formal professional papers but has less stringent limitations on manuscript length and extent of graphic presentations.
- TECHNICAL MEMORANDUM. Scientific and technical findings that are preliminary or of specialized interest, e.g., quick release reports, working papers, and bibliographies that contain minimal annotation. Does not contain extensive analysis.
- CONTRACTOR REPORT. Scientific and technical findings by NASA-sponsored contractors and grantees.

- CONFERENCE PUBLICATION. Collected papers from scientific and technical conferences, symposia, seminars, or other meetings sponsored or cosponsored by NASA.
- SPECIAL PUBLICATION. Scientific, technical, or historical information from NASA programs, projects, and mission, often concerned with subjects having substantial public interest.
- TECHNICAL TRANSLATION.
   English-language translations of foreign scientific and technical material pertinent to NASA's mission.

Specialized services that complement the STI Program Office's diverse offerings include creating custom thesauri, building customized databases, organizing and publishing research results . . . even providing videos.

For more information about the NASA STI Program Office, see the following:

- Access the NASA STI Program Home Page at http://www.sti.nasa.gov/STI-homepage.html

# BOREAS TF-4 CO<sub>2</sub> and CH<sub>4</sub> Soil Profile Data from the SSA

Rob Striegl, Kimberly P. Wickland

# **Summary**

The BOREAS TF-4 team measured distributions of carbon dioxide (CO<sub>2</sub>) and methane (CH<sub>4</sub>) concentrations for the upper 5 m of soil and unsaturated zone at the mature stand, upper 6 m at the 20-year-old stand, and the upper 1 m at the 8-year-old stand and clear cut area at the BOREAS SSA during August 1993 to March 1995. Particle size and carbon content of the unsaturated deposits, precipitation, soil temperature and moisture, carbon and oxygen isotopes of soil CO<sub>2</sub>, and soil water chemistry are also presented. The data are stored in tabular ASCII files.

#### 1. Data Set Overview

#### 1.1 Data Set Identification

BOREAS TF-04 CO<sub>2</sub> and CH<sub>4</sub> Soil Profile Data from the SSA

#### 1.2 Data Set Introduction

Data presented in this document were collected at the Old Jack Pine (OJP) and Young Jack Pine (YJP) tower flux sites and nearby clear cut areas at the BOReal Ecosystem-Atmosphere Study (BOREAS) Southern Study Area (SSA). The BOREAS Tower Flux (TF)-04 team measured distributions of carbon dioxide (CO<sub>2</sub>) and methane (CH<sub>4</sub>) concentrations for the upper 5 m of soil and unsaturated zone at the mature stand, upper 6 m at the 20-year-old stand, and the upper 1 m at the 8-year-old stand and clear cut area at the SSA during August 1993 to March 1995. Particle size and carbon content of the unsaturated deposits, precipitation, soil temperature and moisture, carbon and oxygen isotopes of soil CO<sub>2</sub>, and soil water chemistry are also presented. The data are stored in tabular American Standard Code for Information Interchange (ASCII) files.

#### 1.3 Objective/Purpose

This study presents data relevant to understanding the transfer and storage of carbon among soil, the unsaturated zone, ground cover vegetation, and understory air in jack pine forest at the SSA. The data were collected continuously from May through September 1994 and during March 1995.

#### 1.4 Summary of Parameters

The primary focus is on the net concentrations of soil CO<sub>2</sub> and CH<sub>4</sub> measured.

#### 1.5 Discussion

Jack pine woodlands are an important component of the boreal forest, covering more than  $2 \times 10^{12}$  m² of predominantly well-drained uplands in northern North America. As part of BOREAS, our study objectives were (1) to compare soil respiration at an undisturbed 65- to 90-year-old mature jack pine-lichen woodland with soil respiration at a formerly continuous portion of the stand that was clear-cut harvested during the previous winter, and (2) to identify and quantify the sources of  $CO_2$  and  $CH_4$  production within the soil profile.

# 3. Theory of Measurements

Atmospheric chemistry measurements and modeling studies identify a global imbalance between known CO<sub>2</sub> production and uptake, with a potentially large terrestrial carbon sink possible in boreal forests. Northern woodlands are also perceived to be very sensitive to climate change. The predicted warming and drying of the boreal region could profoundly affect regional carbon sources and sinks. Carbon cycling of the boreal forest has consequently been a central theme of much recent field research. With the intent of eventually extrapolating land-based carbon, energy, and water flux measurements to the entire boreal forest biome, BOREAS subdivided the northern and southern sections of Canadian boreal forest into aspen, jack pine, and bog-fen landscapes for intensive study. Studies within these vegetation types focused on a variety of factors that influence carbon cycling, including forest stand age and land surface disturbances (Sellers et al., 1995).

Soil respiration, the second largest flux in the global carbon cycle, includes all CO<sub>2</sub> produced by roots, soil organisms, and oxidation that is emitted across the soil-air interface. Although globally important, soil respiration is not well characterized spatially or seasonally for most ecosystems.

# 4. Equipment

#### 4.1 Sensor/Instrument Description

#### 4.1.1 Collection Environment

Data were collected under all environmental conditions.

#### 4.1.2 Source/Platform

Ground.

### 4.1.3 Source/Platform Mission Objectives

Support investigators and soil probes.

#### 4.1.4 Key Variables

CO<sub>2</sub> and CH<sub>4</sub> concentrations.

#### 4.1.5 Principles of Operation

Soil surface temperature was measured using a Fluke model 51 K thermometer at three depths (0.05, 0.10, and 0.15 m) at each pair of chambers in conjunction with flux measurements.

Soil water content was determined from soil samples collected at each pair of chambers concurrent with flux measurements. Each sample included the top 0.05 m of soil and was sealed in an air-tight container until analysis. The samples were weighed, oven-dried at 105 °C for approximately 24 hours, and weighed again. After subtracting the container weight, percent water content was calculated as the difference of the original sample weight and the dried sample weight divided by the original sample weight and multiplied by 100 (Klute, 1986).

Concentrations  $CO_2$  and  $CH_4$  in soil gas were measured at chamber pairs at each of the four transects using 2.0-mm inside diameter stainless steel probes. The probes were inserted to soil depths ranging from 0.02 m to 0.50 m, and soil gas was collected using nylon syringes.  $CO_2$  concentration was analyzed onsite using a PP Systems model EGM infrared gas analyzer (IRGA), and  $CH_4$  concentration was analyzed by gas chromatography using methods described above. Soil gas collection was concurrent with chamber measurements.

In addition to the chamber pair probe measurements, each site had a series of permanent probes installed for soil gas collection. The OJP site had permanent probes installed within 10 m of the first chamber pair (GH) to a maximum depth of 3.4 m. The YJP site had permanent probes installed within 10 m of the first chamber pair (AB) to a maximum depth of 6.0 m. Additional probes were located 5 m south of the YJP instrument shelter.

Soil gas was collected from three series of depths in the unsaturated zone at YJP. CO<sub>2</sub>, extracted from the gas by cryogenic trapping, was analyzed for <sup>13</sup>C and <sup>18</sup>O content using mass spectrometry at the U.S. Geological Survey gas isotope laboratory in Denver, CO. Values were obtained from samples collected on one occasion. Stable isotope values are presented in delta notation in units of the parts per thousand relative difference (permil) between the ratios of <sup>13</sup>C to <sup>12</sup>C and <sup>18</sup>O to <sup>16</sup>O in the samples and Pee Dee belemnite for <sup>13</sup>C and Standard Mean Ocean Water for <sup>18</sup>O.

Gravity drainage lysimeters were installed at the YJP and OJP sites to collect liquid water percolating through the unsaturated sands to a maximum depth of 1.00 m. Only one rainfall event (day 200, 1994) was large enough to initiate sufficient percolation at the YJP site for water sample collection and analysis. Sufficient water volume was never collected at the OJP site.

#### 4.1.6 Sensor/Instrument Measurement Geometry

Not applicable.

#### 4.1.7 Manufacturer of Sensor/Instrument

Concentrations  $CO_2$  and  $CH_4$  in soil gas were measured at chamber pairs at each of the four transects using 2.0-mm inside diameter stainless steel probes. The probes were inserted to soil depths ranging from 0.02 m to 0.50 m, and soil gas was collected using nylon syringes.

- Fluke model 51 K thermometer

#### 4.2 Calibration

#### 4.2.1 Specifications

None given.

#### **4.2.1.1 Tolerance**

None given.

#### 4.2.2 Frequency of Calibration

Traceable gas calibration standards for all CO<sub>2</sub> and CH<sub>4</sub> analyses were provided by BOREAS operations.

#### 4.2.3 Other Calibration Information

None given.

# 5. Data Acquisition Methods

Soil surface temperature was measured using a Fluke model 51 K thermometer at three depths (0.05, 0.10, and 0.15 m) at each pair of chambers in conjunction with flux measurements.

Soil water content was determined from soil samples collected at each pair of chambers concurrent with flux measurements. Each sample included the top 0.05 m of soil and was sealed in an air-tight container until analysis. The samples were weighed, oven-dried at 105 °C for approximately 24 hours, and weighed again. After subtracting the container weight, percent water content was calculated as the difference of the original sample weight and the dried sample weight divided by the original sample weight and multiplied by 100 (Klute, 1986).

Concentrations  $CO_2$  and  $CH_4$  in soil gas were measured at chamber pairs at each of the four transects using 2.0-mm inside diameter stainless steel probes. The probes were inserted to soil depths ranging from 0.02 m to 0.50 m, and soil gas was collected using nylon syringes.  $CO_2$  concentration was analyzed onsite using a PP Systems model EGM IRGA, and  $CH_4$  concentration was analyzed by gas chromatography using methods described above. Soil gas collection was concurrent with chamber measurements.

In addition to the chamber pair probe measurements, each site had a series of permanent probes installed for soil gas collection. The OJP site had permanent probes installed within 10 m of the first chamber pair (GH) to a maximum depth of 3.4 m. The YJP site had permanent probes installed within 10 m of the first chamber pair (AB) to a maximum depth of 6.0 m. Additional probes were located 5 m south of the YJP instrument shelter.

Soil gas was collected from three series of depths in the unsaturated zone at YJP. CO<sub>2</sub>, extracted from the gas by cryogenic trapping, was analyzed for <sup>13</sup>C and <sup>18</sup>O content using mass spectrometry at the U.S. Geological Survey gas isotope laboratory in Denver, CO. Values were obtained from samples collected on one occasion. #### 6. Observations

**6.1 Data Notes**None given.

**6.2 Field Notes**None given.

# 7. Data Description

#### 7.1 Spatial Characteristics

#### 7.1.1 Spatial Coverage

The North American Datum of 1983 (NAD83) coordinates of the sites are:

SSA-OJP: 53.91634° N, 104.69203° W SSA-YJP: 53.87581° N, 104.64529° W Clear Cut (CC): 53.9090° N, 104.6595° W Recent Cut (RC): 53.9091° N, 104.6671° W

#### 7.1.2 Spatial Coverage Map

Not available.

#### 7.1.3 Spatial Resolution

These are point measurements made at the given locations.

#### 7.1.4 Projection

Not applicable.

#### 7.1.5 Grid Description

Not applicable.

#### 7.2 Temporal Characteristics

#### 7.2.1 Temporal Coverage

The data set covers the period from 26-May-1994 to 21-Mar-1995.

#### 7.2.2 Temporal Coverage Map

Not available.

#### 7.2.3 Temporal Resolution

Soil gas collection was concurrent with chamber measurements.

#### 7.3 Data Characteristics

#### 7.3.2 Variable Description/Definition

The descriptions of the parameters contained in the data files on the CD-ROM are:

#### ${\tt TF04\_SOIL\_CARBON}$

Column Name	Description
SITE_NAME	The identifier assigned to the site by BOREAS, in the format SSS-TTT-CCCCC, where SSS identifies the portion of the study area: NSA, SSA, REG, TRN, and TTT identifies the cover type for the site, 999 if unknown, and CCCCC is the identifier for site, exactly what it means will vary with site type.
SUB_SITE	The identifier assigned to the sub-site by BOREAS in the format GGGGG-IIIII, where GGGGG is the group associated with the sub-site instrument, e.g. HYD06 or STAFF, and IIIII is the identifier for sub-site, often this will refer to an instrument.
DATE_OBS	The date on which the data were collected.
DEPTH_INTERVAL	The range of depths at which the soil carbon measurements were taken.
TOTAL_CARBON_CONTENT	The percent total carbon content by weight of the sample.
INORGANIC_CARBON_CONTENT	The percent inorganic carbon content by weight of the sample.
CRTFCN_CODE	The BOREAS certification level of the data. Exa Examples are CPI (Checked by PI), CGR (Certified by Group), PRE (Preliminary), and CPI-??? (CPI but questionable).
REVISION_DATE	The most recent date when the information in the referenced data base table record was revised.

DEL\_180

TF04_SOIL_CH4_PROFILE  Column Name	Description
SITE_NAME	The identifier assigned to the site by BOREAS, in the format SSS-TTT-CCCCC, where SSS identifies the portion of the study area: NSA, SSA, REG, TRN, and TTT identifies the cover type for the site, 999 if unknown, and CCCCC is the identifier for site, exactly what it means will vary with site type.
SUB_SITE	The identifier assigned to the sub-site by BOREAS in the format GGGGG-IIIII, where GGGGG is the group associated with the sub-site instrument, e.g. HYD06 or STAFF, and IIIII is the identifier for sub-site, often this will refer to an instrument.
DATE_OBS	The date on which the data were collected.
CHAMBER_ID	Identifier assigned to the chamber measured
SOIL_DEPTH	The depth below the soil surface at which the
	measurement was taken.
CH4_CONC	CH4 concentration.
CRTFCN_CODE	The BOREAS certification level of the data. Exa Examples are CPI (Checked by PI), CGR (Certified by Group), PRE (Preliminary), and CPI-??? (CPI but greationable)
DEVICION DATE	but questionable).  The most recent date when the information in the
REVISION_DATE	referenced data base table record was revised.
TF04_SOIL_CO2_ISOTOPE	
Column Name	Description
SITE_NAME	The identifier assigned to the site by BOREAS, in the format SSS-TTT-CCCCC, where SSS identifies the portion of the study area: NSA, SSA, REG, TRN, and TTT identifies the cover type for the site, 999 if unknown, and CCCCC is the identifier for site, exactly what it means will vary with site type.
SUB_SITE	The identifier assigned to the sub-site by BOREAS in the format GGGGG-IIIII, where GGGGG is the group associated with the sub-site instrument, e.g. HYD06 or STAFF, and IIIII is the identifier for sub-site, often this will refer to an instrument.
DATE_OBS	The date on which the data were collected.
CHAMBER ID	Identifier assigned to the chamber measured
SOIL_DEPTH	The depth below the soil surface at which the

measurement was taken. DEL\_13C The del 13C is a relative difference between the sample and the PeeDee Belemnite standard, relative to the PeeDee Belemnite standard.

The del 180 is a relative difference between the sample and the SMOW standard, relative to the

SMOW standard.

CO2 CONC CO2 concentration.

CRTFCN\_CODE The BOREAS certification level of the data. Exa

Examples are CPI (Checked by PI), CGR (Certified by Group), PRE (Preliminary), and CPI-??? (CPI

but questionable).

REVISION\_DATE The most recent date when the information in the

referenced data base table record was revised.

TF04\_SOIL\_CO2\_PROFILE

Column Name Description

SITE\_NAME The identifier assigned to the site by BOREAS,

in the format SSS-TTT-CCCCC, where SSS identifies the portion of the study area: NSA, SSA, REG, TRN, and TTT identifies the cover type for the site, 999 if unknown, and CCCCC is the identifier

for site, exactly what it means will vary with

site type.

SUB\_SITE The identifier assigned to the sub-site by BOREAS

in the format GGGGG-IIIII, where GGGGG is the group associated with the sub-site instrument, e.g. HYD06 or STAFF, and IIIII is the identifier

for sub-site, often this will refer to an

instrument.

DATE\_OBS The date on which the data were collected.

CHAMBER\_ID Identifier assigned to the chamber measured

SOIL DEPTH The depth below the soil surface at which the

measurement was taken.

CO2\_CONC CO2 concentration.

CRTFCN\_CODE The BOREAS certification level of the data. Exa

Examples are CPI (Checked by PI), CGR (Certified by Group), PRE (Preliminary), and CPI-??? (CPI

but questionable).

REVISION\_DATE The most recent date when the information in the

referenced data base table record was revised.

TF04\_SOIL\_TEMP\_MOIST

Column Name Description

SITE NAME The identifier assigned to the site by BOREAS,

in the format SSS-TTT-CCCCC, where SSS identifies the portion of the study area: NSA, SSA, REG, TRN, and TTT identifies the cover type for the site, 999 if unknown, and CCCCC is the identifier for site, exactly what it means will vary with

site type.

SUB SITE The identifier assigned to the sub-site by BOREAS

in the format GGGGG-IIIII, where GGGGG is the group associated with the sub-site instrument, e.g. HYD06 or STAFF, and IIIII is the identifier

for sub-site, often this will refer to an

instrument.

DATE\_OBS The date on which the data were collected.

TIME\_OBS The Greenwich Mean Time (GMT) when the data were

collected.

CHAMBER\_ID Identifier assigned to the chamber measured

AIR\_TEMP The air temperature.

SOIL\_TEMP\_5CM Soil temperature measured at a depth of 5 cm.

SOIL\_TEMP\_10CM Soil temperature at a depth of 10 cm. SOIL\_TEMP\_15CM Soil temperature at a depth of 15 cm.

SOIL\_WATER\_CONTENT The water content of the soil, measured at the

top 0.05 meters of soil, reported in percent

weight.

CRTFCN\_CODE The BOREAS certification level of the data. Exa

Examples are CPI (Checked by PI), CGR (Certified by Group), PRE (Preliminary), and CPI-??? (CPI

but questionable).

REVISION\_DATE The most recent date when the information in the

referenced data base table record was revised.

TF04\_SOIL\_WATER\_CHEM

Column Name Description

Minimum Data Value -- The minimum value found in the column.

Maximum Data Value -- The maximum value found in the column.

Missng Data Value -- The value that indicates missing data. This is used to indicate that an attempt was made to determine the parameter value, but the attempt was unsuccessful.

Unrel Data Value -- The value that indicates unreliable data. This is used to indicate an attempt was made to determine the parameter value, but the value was deemed to be

unreliable by the analysis personnel.

```
Below Detect Limit -- The value that indicates parameter values below the instruments detection limits. This is used to indicate that an attempt was made to determine the parameter value, but the analysis personnel determined that the parameter value was below the detection limit of the instrumentation.
```

Data Not Cllctd -- This value indicates that no attempt was made to determine the parameter value. This usually indicates that BORIS combined several similar but not identical data sets into the same data base table but this particular science team did not measure that parameter.

```
Blank -- Indicates that blank spaces are used to denote that type of value.

N/A -- Indicates that the value is not applicable to the respective column.

None -- Indicates that no values of that sort were found in the column.
```

#### 7.4 Sample Data Record

The following are wrapped versions of data record from a sample data file on the CD-ROM.

# 8. Data Organization

#### 8.1 Data Granularity

The smallest unit of data tracked by the BOREAS Information System (BORIS) is the measurement(s) made for a given site at a given time.

#### 8.2 Data Format(s)

The Compact Disk-Read-Only Memory (CD-ROM) files contain ASCII numerical and character fields of varying length separated by commas. The character fields are enclosed with single apostrophe marks. There are no spaces between the fields.

Each data file on the CD-ROM has four header lines of Hyper-Text Markup Language (HTML) code at the top. When viewed with a Web browser, this code displays header information (data set title, location, date, acknowledgments, etc.) and a series of HTML links to associated data files and related data sets. Line 5 of each data file is a list of the column names, and line 6 and following lines contain the actual data.

# 9. Data Manipulations

#### 9.1 Formulae

# **9.1.1 Derivation Techniques and Algorithms** None given.

#### 9.2 Data Processing Sequence

#### 9.2.1 Processing Steps

None given

#### 9.2.2 Processing Changes

None given.

#### 9.3 Calculations

# 9.3.1 Special Corrections/Adjustments

None given.

#### 9.3.2 Calculated Variables

None.

#### 9.4 Graphs and Plots

None given.

#### 10. Errors

#### 10.1 Sources of Error

None given.

#### **10.2 Quality Assessment**

#### 10.2.1 Data Validation by Source

None given.

### 10.2.2 Confidence Level/Accuracy Judgment

None given.

#### **10.2.3 Measurement Error for Parameters**

None given.

# 10.2.4 Additional Quality Assessments

None given.

#### 10.2.5 Data Verification by Data Center

Data were examined for general consistency and clarity.

#### 11. Notes

#### 11.1 Limitations of the Data

None given.

#### 11.2 Known Problems with the Data

See Section 10.1.

#### 11.3 Usage Guidance

See Section 10.1.

#### 11.4 Other Relevant Information

None given.

# 12. Application of the Data Set

None given.

#### 13. Future Modifications and Plans

None given.

#### 14. Software

#### 14.1 Software Description

None given.

#### 14.2 Software Access

Not applicable.

#### 15. Data Access

The CO<sub>2</sub> and CH<sub>4</sub> soil profile data are available from the Earth Observing System Data and Information System (EOSDIS) Oak Ridge National Laboratory (ORNL) Distributed Active Archive Center (DAAC).

#### 15.1 Contact Information

For BOREAS data and documentation please contact:

ORNL DAAC User Services Oak Ridge National Laboratory P.O. Box 2008 MS-6407 Oak Ridge, TN 37831-6407 Phone: (423) 241-3952

Fax: (423) 574-4665

E-mail: ornldaac@ornl.gov or ornl@eos.nasa.gov

#### 15.2 Data Center Identification

Earth Observing System Data and Information System (EOSDIS) Oak Ridge National Laboratory (ORNL) Distributed Active Archive Center (DAAC) for Biogeochemical Dynamics http://www-eosdis.ornl.gov/.

#### 15.3 Procedures for Obtaining Data

Users may obtain data directly through the ORNL DAAC online search and order system [http://www-eosdis.ornl.gov/] and the anonymous FTP site [ftp://www-eosdis.ornl.gov/data/] or by contacting User Services by electronic mail, telephone, fax, letter, or personal visit using the contact information in Section 15.1.

#### 15.4 Data Center Status/Plans

The ORNL DAAC is the primary source for BOREAS field measurement, image, GIS, and hardcopy data products. The BOREAS CD-ROM and data referenced or listed in inventories on the CD-ROM are available from the ORNL DAAC.

# 16. Output Products and Availability

# 16.1 Tape Products

None.

#### 16.2 Film Products

None.

#### 16.3 Other Products

These data are available on the BOREAS CD-ROM series.

# 17.3 Archive/DBMS Usage Documentation None.

#### 18. Glossary of Terms

None.

# 19. List of Acronyms

ASCII - American Standard Code for Information Interchange

BOREAS - BOReal Ecosystem-Atmosphere Study

BORIS - BOREAS Information System

CC - Clear Cut site

CD-ROM - Compact Disk-Read-Only Memory
DAAC - Distributed Active Archive Center

EOS - Earth Observing System

EOSDIS - EOS Data and Information System GIS - Geographic Information System

GMT - Greenwich Mean Time

GSFC - Goddard Space Flight Center HTML - HyperText Markup Language IRGA - Infrared Gas Analyzer

NAD83 - North American Datum of 1983

NASA - National Aeronautics and Space Administration

NSA - Northern Study Area
OBS - Old Black Spruce
OJP - Old Jack Pine

ORNL - Oak Ridge National Laboratory
PANP - Prince Albert National Park

PPFD - Photosynthetically Active Photon Flux Density

RC - Recently Cut site SSA - Southern Study Area

TF - Tower Flux

TGB - Trace Gas Biochemistry
URL - Uniform Resource Locator

YJP - Young Jack Pine

13. ABSTRACT (Maximum 200 words)					

The BOREAS TF-4 team measured distributions of carbon dioxide  $(CO_2)$  and methane  $(CH_4)$  concentrations for the upper 5 m of soil and unsaturated zone at the mature stand, upper 6 m at the 20-year-old stand, and the upper 1 m at the 8-year-old stand and clear cut area at the BOREAS SSA during August 1993 to March 1995. Particle size and carbon content of the unsaturated deposits, precipitation, soil temperature and moisture, carbon and oxygen isotopes of soil  $CO_2$ , and soil water chemistry are also presented. The data are stored in tabular ASCII files.
